TITLE: Epoxy resins based on dicyclopentadiene and its ethers

SOURCE: Plasticheskiye massy, no. 12, 1965, 15-16

TOPIC TAGS: epoxide, maleic anhydride, epoxy plastic/ ED-5 dian resin

ABSTRACT: Preparation of diepoxy compounds from dicyclopentadiene (I) and its ethers and the properties of resins and plastic glass derived from them are described. Epoxidation of I, according to the equation

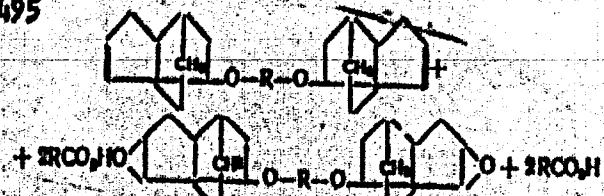

yielded the diepoxy compound in 85% yield, m.p. 183°C. Ethylene and diethylene glycol ethers of I were epoxidized according to the scheme

Card 1/2

UDC: 678.644.4215-678.762.9

L 16511-66

in 84--90% yield. Diesters of I and its ethers were cured with anhydrides of dibasic acids, e.g., maleic anhydride. Physical properties of the products and of their mixtures with dian epoxy resins are tabulated, and thermomechanical curves are shown. Product of the mixture of epoxycyclohexadienes with diam ED-52 in a 40:60 ratio possessed the best physical-mechanical and dielectric properties.⁵ Orig. art. has: 4 tables, 3 figures, and 3 structures.

SOURCE: Zhurnal fizicheskoy khimii, v. 40, no. 4, 1966, 925-927

TOPIC TAGS: phase equilibrium, chloroform, silane, IR spectroscopy

ABSTRACT: The phase composition of a binary mixture¹ of specially purified trichlorosilane and redistilled chloroform was analyzed by infrared spectroscopy (UR-10 spectrometer,¹ relative error 3 - 7%). The results were interpreted statistically and verified thermodynamically. The data obtained were used to calculate coefficients of relative volatility and activity. The system is characterized by a negative deviation from Raoult's principle. The measurements on the UR-10 were performed by B.V. Zhadanov. Orig. art. has: 5 figures and 1 table.

TITLE: The Moling of Soil While Plowing (Krotovaniye pochv
odnovremenno so vspashkoy)

PERIODICAL: Gidrotehnika i melioratsiya, 1959, Nr 2, pp 21-27
(USSR)

ABSTRACT: The authors advocate the moling of wet, stone-free
clay soils drained by open or covered drains. The
new drainage method consists of making mole burrows
into the ground at a depth of 35-40 cm, with 1 to 1.5m
between the mole drains. The moling (krotovaniye)
differs from mole drainage (krotovyy drenazh) insofar
as it is carried out while plowing. For this purpose,
a special plow attachment of the "Krot 9-B-type" is
used. The Severnyy nauchno-issledovatel'skiy insti-
tut gidrotehniki i melioratsii (Northern Research
Institute of Hydraulic Engineering and Amelioration)
has supplied the following data on the new implement:

Card 1/3

The Moling of Soil While Plowing

SOV/99-59-2-4/12

although plowing-plus-moling is about 25% slower than conventional plowing, and the fuel consumption rate per hectare is up 20-30%, these additional expenses are compensated for by as much as give to ten times, due to a greater grain yield. Moling, combined with other ameliorative measures, results in 20-40% higher crop productivity as compared with conventional till-ing methods. The mole plows have been tested at the kolkhoz "Pobeda", Leningradskaya oblast'; Pribaltiy-skaya MIS, Latviyskaya SSR; sovkhoz "Osvobozndeniye", Leningradskaya oblast'; kolkhoz imeni Chapayeva, Arkhangel'skaya oblast'; Kaliningradskaya oblastnaya opytno-meliorativnaya stantsiya (Testing and Amelioration station of the Kaliningrad oblast'); kolkhoz imeni Stalin

TITLE: New Method for Anticorrosion Ornamental Chrome Plating (Novyy metod antikorroziynogo dekorativnogo khromirovaniya)

PERIODICAL: Tekhn-ekon. byul. Sovnarkhoza Lipetskogo ekon. adm. r-na, 1958, Nr 2, pp 23-24

ABSTRACT: The author describes shop tests on the chrome plating of iron and steel machine parts in a tetrachromate bath of the following composition (in g/liter): CrO₃ 400, NaOH 65, H₂SO₄ 0.85 - 1.0, and Cr³⁺ 10 - 30 with a cathode cd=25 - 95 a/dm² and a temperature up to 22°C. It is pointed out that this type of plating is equivalent in its ornamental outward appearance and anticorrosion properties to the usual multilayer ornamental plating.

Pyridine analogs of antimalarial drugs. II. V. Klimko and V. L. Klimko. Monatshefte für Chemie, Allgemeine Chemie und Anwendung, 101, 10, 1960 (1961). Several series of 4-aminopyridines were prepared, and found inactive against *Plasmodium vivax* in avian hosts. In the prep. of the 4-halopyridines, hydrolysis of 4-pyridyl-pyridinium bromide- HBr (from Br and $\text{C}_6\text{H}_5\text{N}$), followed by treatment of the resulting 4-hydroxypyridine with PCl_5 , led to unsatisfactory yields in the hydrolysis stage. Much better results were obtained by heating 20 g. 4-hydrazinyl-2,6-pyridinedisubstituted acid (chloroacetic acid) to 230° under an air流 but condenser until CO_2 evolution ceased; the cooled mass, treated with 100 cc. H_2O_2 and charcoal, boiled 40 min., filtered, and dried, gave 80% 4-hydroxypyridine, m. 160°. This (12.6 g.) and 51.5 g. PCl_5 were heated in a water bath 3 hrs., after which the excess PCl_5 was removed by evaporation, and the residue was mixed with 100 cc. 40% NaOH and steam-distilled; the distillate, treated with NaOH and evap. with H_2O_2 , yielded 61%, 4-Mercaptopyridine, m.p. 77°; 11/17 and 1/10 m. 200° (sealed tube); 1/1 (2 g.) and 50 g. $\text{NaCl} \cdot \text{CH}_3\text{CO}_2\text{NH}_2$ were refluxed 8 hrs., then treated with a little H_2O_2 and 13 g. 40% NaOH, and the excess dissolved was removed with steam; the residue, treated with 30 cc. 40% NaOH and evap. with H_2O_2 , gave about 1.5 g. 4-aminopyridine, m.p. 180°, m. 180°, and 5 g. crude (2.3 g. pure) 4-(4-dimethylaminomethyl)pyridine (2.3 g. pure), 4-(4-dimethylaminomethyl)pyridine, m. 173° (pure), m. 173° (pure); diphenylamine, m. 150° (from KOH), 1/17 g. 1 and 20 g. $\text{NaCl} \cdot \text{CH}_3\text{CO}_2\text{NH}_2$ were heated to 175° A hrs., cooled, filtered

ESR
MATERIALS - CHEMISTRY DEPT.

from the off-white 11/1 which was washed with Me_2CO , and the mother liquor freed of the excess 11/1 amine by distillation in vacuo; the residue was treated with an excess of 40% NaOH and evap. until 1/2 part of H_2O_2 - HgBr_2 ; the ext. on distn. gave 2 g. 4-(4-dimethylaminomethyl)pyridine, m. 200-21°; diphenylamine, m. 161° (from KOH). 1/17 g. and 20 g. $\text{NaCl} \cdot \text{CH}_3\text{CO}_2\text{NH}_2$ were refluxed 8 hrs.; treatment with 40% NaOH and evap. with H_2O_2 gave 2.4 g. crude 4-aminopyridine and 2 g. (0.8 g. pure) 4-(4-dimethylaminomethyl)pyridine, m. 173° (from KOH). 1/17 g. 1 and 20 g. $\text{NaCl} \cdot \text{CH}_3\text{CO}_2\text{NH}_2$ were heated to 175° A hrs., cooled, filtered

0.1 g. phenylurea below 10° to 50 ml. CH_3COH over 40-50

min., followed by 1.0 hr. at 40-50°, and passing on ice
gave 41.0% *N*-carbamylbenzamides, in the form
of a 64% paste (1). This contains 18 g. active material.
Treated in Et_2O with dry NaOH , gave 75% of the correspond-
ing amide, m. 214° (from 60% NaOH). Similarly, 1 and
2 under 2-carboxyphenoxide in Et_2O gave after standing
1 hr., treatment with 10% NaOH , and crystallization of
the lower layer with 20% HCl , 63.5% *N*-carbamyl-*N*-(2-
carboxyphenyl)benzamides, m. 215° (from 60% HCl). Addin.
of 1 (20 g. pure chloride content) to 20 ml. cold, eq. NaCl
(equiv. 7 g. 2-amino-4-methylbenzoate) and 10 g. NaCl
(equiv. rises to 21-22°), stirring 4 hrs. at 20°, diln. with 60
ml. H_2O , and letting stand overnight, followed by sepa-
ration in C_6H_6 red with HCl and purification by column
of 4% NaOH and HCl , with HCl , gave 11.1% *N*-carbamyl-
N-(4-methyl-2-phenyl)benzamides, m. 228° (from
20% NaOH); the NaOH -based portion, m. 218°, appears
to be a dihydroamide, $\text{C}_{12}\text{H}_{14}\text{N}_2\text{O}_2$. Addin. of 17.2 g.
urea, sulfonamide to 70 ml. cold, eq. NaCl at 40-50°, fol-
lowed over 4-5 hrs. by 1 equiv. 20.7 g. pure chloride
and 7.8 g. NaCl , similarly gave 62.7% *N*-*N*-carbamoyl-
N,N-bis(2-carboxyphenyl)benzamides, decolor. 210° (the open, with
 HCl from NaOH). All of the products are hydrolyzed
to the corresponding sulfonamides after heating 1.5
to 2.0 hrs. with 5-10% NaOH . (B. M. Kondratenko)

TITLE: Beta-Aminovinyl Ketones. Part 7. Reaction of Beta-chlorovinyl
Ketones with Tertiary Amines (Beta-aminovinilketon. VII.
Vzaimodeystviye beta-khlorvinilketonov s tretichnymi aminami)

PERIODICAL: Zhurnal Obshchey Khimii, 1957, Vol. 27, No. 1, pp. 62-65 (U.S.S.R.)

ABSTRACT: The reaction of beta-chlorovinyl ketones with tertiary amines was investigated for the purpose of obtaining quaternary ammonium salts containing the ketovinyl radical. Beta-chlorovinyl ketones, when subjected to numerous reactions, are capable of exchanging their highly mobile chlorine atom into other groupings thereby forming beta-substituted alkylvinyl ketones. The reaction was found to be so smooth that it has been recommended for the separation of beta-chlorovinyl ketones without their preliminary purification directly from the reaction mixture. The same smooth reaction was observed also in the case of pyridine (a similar experiment with methyl-beta-chlorovinyl ketone and pyridine was carried out by A. Ya. Yakubovich and Ye. N. Merkulova (6). Very interesting results were obtained during the hydrolysis of one of the obtained salts - triethyl-(beta-benzoylvinyl)-ammonium chloride - when

Synthesis of beta-Chlorovinylketones. (Issledovaniya v oblasti
proizvodnykh beta-dikarbonilnykh soedineniy. I. Sintez beta-khlorvinyl-
ketonov)

PERIODICAL: Zhurnal Obshchey Khimii, 1957, vol 27, No 2, pp. 370-374 (U.S.S.R.)

ABSTRACT: The authors improved a method of obtaining beta-chlorovinyl ketones by the condensation of carbonyl chlorides with vinyl chloride and enlarged the field of application of this synthesis. The intermediate products of this condensation were identified as beta-beta-dichloroethyl ketones. It was established that the intermediately forming aryl-beta-beta-dichloroethyl ketones have a much higher stability than their aliphatic analogues. An attempt to obtain beta, beta-dichloroethylaryl ketone by the reaction of p-methoxybenzoyl chloride with vinyl chloride in the presence of anhydrous aluminum chloride was unsuccessful because the methoxyl group was also involved in the reaction. By using anhydrous aluminum chloride in nitromethane in the role of the condensation agent, it was possible to obtain a 50% yield

Investigation of Derivatives of beta-Dicarbonyl Compounds. Part 1.

of p-methoxyphenyl-beta, beta-dichloroethyl ketone. The obtained aryl-beta, beta-dichloro ketones were quite stable in storage and slowly separated the hydrogen chloride during the boiling with aqueous bicarbonate or sodium carbonate solutions. The conversion of beta-beta-dichloroethyl ketones into homologous beta-chlorovinyl ketones was realized easily during the reaction of the former with trialkylamines (e. g., triethylamine).

TITLE: Brief Communications. Substituted Malondialdehydes
and Some of Their Reactions

PERIODICAL: Khimicheskaya nauka i promyshlennost', 1959, Vol 4,
Nr 6, pp 805-806 (USSR)

ABSTRACT: The preparation and halogenation of 1,3-dichloro-1,3-
-dialkoxypropanes (II) was investigated. Di-
 α -chloroothers (II) are easily formed from acetals
(I) and thionyl chloride or phosphorus pentachloride.
II with alcohols are converted into I and by action
of CH_3COOK , diacetohydroxy derivatives (III) are
formed.

TITLE: Method for dynamic damping of vibrations. Class 47, No. 168965

SOURCE: Byulleten' izobreteny i tovarnykh znakov, no. 5, 1965, 96

TOPIC TAGS: vibration damping, vibration, oscillation amplitude

ABSTRACT: This Author Certificate describes a method for dynamic damping of vibrations by means of a discrete action on the vibrating system, excluding the possibility of simultaneous action of the elastic and excitation forces. This is done to limit the vibration amplitude of the mechanical or electrical systems.

KLOKOVA-DEUTSCHOVA E. NEUROLOGICKA klinika Karlovy university. Preliminary
studie o vysledcích lecby horocnym dusikem u nemoci nervovych Preliminary
note on the results of treatment of nervous diseases with N-mustard Ces.
Lek, č. 1950, 89/20 (572-377) Table 1

Seventy cases were treated by the method of Aleksandrowicz (0.01-0.02 mg. of N-mustard per kg. body weight). In addition to the indications given by the Polish authors (polyradiculoneuritis, paresis of muscular orig in, tb spondylitis, herpes zoster) the treatment was found of value in some cases of disseminated sclerosis, trigeminal neuralgia and facial nerve palsy. On the assumption that N-Mustard acts in a similar way to X-rays, it was tried also for syringomyelia with promising results. It also had an analgesic effect in the crises and lancinating pains of tabes. Of the degenerative diseases, N-mustard was tried in the myopathies; only one case of neural atrophy of the Charcot-Marie-Tooth type responded well, one deteriorated and the remainder were unaffected. Toxic and other side-effects were studied; changes in blood pressure and blood count, and examinations of the E M G and of the vegetative nervous system were recorded.

- ✓ Chromatometry in some industrial intoxications. *Práce Klinika Deutscheschland, Ivan Lany, and Jiří Štěpán Třebíč, MUDr., České Budějovice, 1955.* — In CS₂ intoxication chromatometric exams showed a peripheral syndrome (prolonged chromatex especially at the cathode) in 20 cases, a central syndrome (irreversing up or inversion of the difference between antagonist muscles) in 15 cases, a mixed one in 8 cases, normal pattern in 7 cases. In CH₂Cl intoxication there was a peripheral syndrome in 17 cases, a central one in 8 cases, a mixed one in 8 cases, and shortened chromatex in 3 cases. There was a general parallelism between the clinical and chromatometric findings. Minor differences between the chromatometric and clinical pictures are evaluated. I. M. Hais

24, 3, 331-337, 1961."

Prague, Ceskoslovenska Neurologie, Vol 26(59), no 1, Jan 63; pp 62-63.

Abstract: Polemical rebuttal of the authors of challenged article:
the challenger's article was published after the authors' one was
submitted; there were many important and interesting and unique
features to their case report, and anyway it does not seem fitting
to start a priority argument about a case report in which no novel
methodological or technical developments are reported.

"Effect of Radiation on EEG in Man."

Prague, Ceskoslovenska Neurologie, Vol 26(59), No 3, May 63; pp 184-191.

Abstract [English summary modified]: EEG and clinical data on 42 men and
4 women who had been exposed to various types of radiation for 1 to 17
years - 41 to centimeter-length waves, 4 to meter-long ones, 1 to x-ray.
Main clinical symptoms were somnolence, apathy, chronic fatigue, neurotic
signs. Of 54 tracings, 30% were abnormal mainly decreased vigilance and
sleep waves. Both EEG and clinical signs show preponderance of
inhibition over activation. Two graphs, 3 EEGs, 3 tables; 12 Czech, 4
Soviet, 12 Western references.

"Examination of Workmen Exposed to Electromagnetic Waves of One Meter and Longer Length in the Region of West Bohemia."

Prague, Pracovni Lekarstvi, Vol 18, No 3, Apr 66, pp 100 - 106

Abstract /Authors' English summary modified/: 68 workmen employed in areas of electromagnetic fields with frequencies of 2.4 to 2.4 cycles, and wave lengths 3.5 to 30 meters were investigated. 52 were subjected to an uninterrupted field, and 16 to a polyfrequency interrupted field. 23% in the first, and 50% in the second group were influenced by the field. Only in one a serious disease resulted; most suffered simply from headache, fatigue, vegetative symptoms and lack of coordination of the cortex and mesodiencephalic CNS functions. 6 Figures, 2 Tables, 4 Western, 14 Czech references. (Ms. rec. 29 Jan 65).
